

Now available, the Model 104

Flap Asymmetry Tester

For Gulfstream Aircraft Models GII, GIII & GIV

Designed & manufactured by AirMech Innovations, the Model 104 Flap Asymmetry Tester is easy to use, accurate, affordable, and has features that will save you time & labor. It's also small enough to stow onboard.

A remarkable feature of the Model 104 is its ability to accurately test both asymmetry switches while accessing only one side of the aircraft, either left or right. No long cables are required.

ONLY: \$3495.00
Includes Carrying Case,
Manual and Cables

Features:

No Power Required: Powered from the aircraft, the Model 104 helps check the flap's electrical system.

Auto Set Switch: Moves flaps & automatically stops at a repeatable reference position.

Manual Run Switch: Allows the technician the ability to manually move the flaps.

Switch Position Display: Shows the position of both asymmetry switches, for comparison.

Flaps Locked Indicator: Indicates asymmetry condition that could cause the flaps to lock.

Phase Error Indicator: Indicates asymmetry switches are not perfectly synchronized.

Warranty: Two (2) years parts and labor.
